“We present here our research on the presence of graphene in covid vaccines. We have carried out a random screening of graphene-like nanoparticles visible at the optical microscopy in seven random samples of vials from four different trademarks, coupling images with their spectral signatures of RAMAN vibration. By this technique, called micro-RAMAN, we have been able to determine the presence of graphene in some of these samples, after screening more than 110 objects selected for their graphene-like appearance under optical microscopy.”

18 REUTERS March 29, 2021:

Yuste is part of a group of scientists and lawmakers, stretching from Switzerland to Chile, who are working to rein in the **potential abuses of neuroscience by companies from tech giants to wearable startups**.

Following his team's discovery, he launched the NeuroRights Initiative, which **advocates five "neuro-rights" to protect how a person's brain data is accessed and used, including a right to mental privacy and to free will**.

"Right now, it's the wild west," Yuste said.

In Chile, senate member Guido Girardi is pushing to translate those principles into law, with a bill that would give legal protection to a suit of neuro-rights, and a complementary reform to the country's constitution.
